

Project Proposal:

An Application to Help Students Study and Improve Their Academic Journey

A common struggle among the students of Pisay is organization, time-management, and having that one project worth 90% of your grade just lying there as the deadline approaches (it's tomorrow.) My project here, aims to make it easier for students, helping them with their quizzes, exams, projects, submissions, and their barely passing grades.

Problem statement: Many students in Pisay feel overwhelmed by how many activities there are in a week, while still trying to find time to study and do assignments

Users: Students in the PSHS system

Project Objectives: Help students keep track of what activities they have, what projects they should do, and help them with studying.

Planned Features: An activity tracker with a calendar, AI assistant for studying (something like ChatGPT),

Planned Inputs/Outputs:

Inputs: Student's planned activities and schedule

Outputs: An organized calendar with a schedule and AI recommendations
